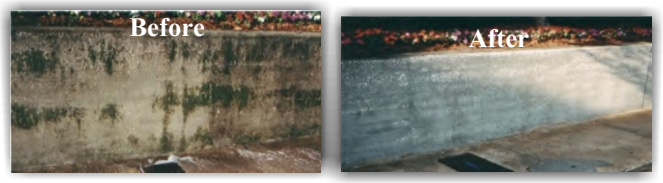
Beyond Green™ Cleaning

PRODUCT SALES SHEET

8609-004
Algae Eater™



Description

- A revolutionary, microbe-powered algae remover.
- Specifically designed to safely remove algae stains from a variety of surfaces.
- Forms a barrier that prevents the re-appearance of algae, moss or lichen for at least six months.
- Does not require scrubbing or pressure washing - spray and leave.
- Contains no caustic-based or acid-based products or chlorine.
- Will not harm plants, landscaping, plastic, painted or metal surfaces.
- Bio-based, all-natural, no VOC's, biodegradable and non-toxic.
- Covers 1,000 square feet per gallon when applied with a fine mist.

Technology Profile

BioTec Technology is the science of using microbes and enzymes to digest and remove the food source used by algae to grow and survive. These microbes and enzymes produce complex chemical reactions that metabolize ammonia, nitrogen and phosphorous into carbon dioxide and water.

By digesting and removing these essential elements, the algae is unable to grow and survive. The result is the removal of algae from vertical and horizontal surfaces. Algae Eater™ creates a barrier that forms on surfaces to prevent re-occurrence of algae. Algae Eater™ is not an algaeicide. It is an all-natural alternative to harsh, hazardous chemicals to remove algae.

Technical Information

Usage	Dilution Ratio	RTU
Physical Properties	Appearance	Liquid
	Color	Amber
	Fragrance	None
	pH	7
	Shelf Life	Minimum 1 Year
Packaging	8609-004	(4) 1 gal./3.78 L

Advantages

Algae disfigures and degrades many types of vertical and horizontal masonry and non-masonry surfaces. Not only is algae an eye-sore, it can be damaging to surfaces as well.

Algae Eater™ is an all-natural and highly efficient alternative to standard hazardous chemicals which require hard scrubbing or damaging power-washing. It renews the appearance of algae-covered surfaces making them look new again.

Conventional cleaners, like chlorine-based products, require multiple treatments and only last a few weeks. In fact, using chlorine-based products (which are 99% water), create more algae growth than they remove. Algae Eater™ creates a barrier on the treated surface to protect and prevent algae build-up for at least six months.

Application

Apply Algae Eater™ with a trigger sprayer or hand sprayer, soaking the entire affected area to ensure the surface to be treated is thoroughly wet.

The stain will disappear in 48 hours or less. After the algae disappears, rinse with low-pressure water to remove dirt and grime. The algae stains will not return for at least six months.

Re-apply every six months to avoid any re-occurring growth of algae. On heavy build-up, a second application may be needed.
